

Figure 1 is a circular radar chart illustrating the contribution of various factors to the total risk of a system. The chart is divided into six segments, each representing a different factor. The segments are labeled: 1. Human factors, 2. Equipment failure, 3. Environmental factors, 4. Management factors, 5. Organizational factors, and 6. External factors. The chart shows that Human factors and Equipment failure are the most significant contributors to the total risk, while External factors are the least significant.
